Aesthetic characteristics

Detached house situated in a rural area. The ground floor of the house was designed as an open space where the kitchen, dining room and living room would take a lead role. The fact that the main entrance is next to the kitchen made it very challenging to find the best possible distribution.

The ample size of this kitchen and its position within the house allow the space available to be optimised using ingenuity and offering good solutions. The entrance hallway has been incorporated into the kitchen to make it more ample, luminous and to give it perspective. The peninsula helps define the perimeter.

This room is an excellent example of integration, where the entrance hall, the kitchen and the dining room come together in perfect harmony without any type of visual separation between them. The result is a diaphanous space that is full of light and very well organised. It becomes the neuralgic centre of this house when friends and family come to visit the homeowners. visitan a los propietarios.

Architecture

One of the priorities when planning this kitchen was to concentrate the units on the sidewalls, reserving the area in front of the windows as the entrance space to the house. As a result, a U distribution was chosen with three well differentiated areas: the area with tall units fitted in the wall, a cooking area equipped with base and wall units and a washing and preparation area that is situated on the peninsula. A space has thus been created that is totally uncluttered and allows people to move comfortably within the kitchen.

The wall unit area is installed next to the wall adjacent to the pantry and is equipped with ovens, fridge and storage units in vertical format that, thanks to their interior equipment, make the most of the space available. Fronts in a natural oak finish, that combine perfectly with the flooring, have been chosen for this area. The cooking area is equipped with large capacity drawers for storing pots, kitchenware and foodstuffs. The wall units are reserved for organising the kitchenware and hiding the cooker hood.

The washing-up area, with sink and dishwasher, is situated in the peninsula, right in front of the windows. The rear side, thanks to the extended worktop, provides an extra space for informal meals or breakfasts.

Highlights

A space in which to enjoy life without leaving the home.

This distribution and the visual warmth this kitchen transmits are its main distinguishing hallmarks. A generous and comfortable space is created that allows for different types of coexistence depending on the owners' moods and needs. Everything is designed to make work easier but also, thanks to a good distribution, to make the space the centre of the home, a meeting place for the family.

To give a sense of unity a uniform range of colours and materials has been used for the whole room. The white creates a clean atmosphere that is full of light whereas the oak, present in the beams, wall panels, tall units and the flooring, adds a warm touch.

This kitchen appears to be simple and warm but has a complex, functional and sophisticated soul.

Tall units

When buying a kitchen it is necessary to take into account many factors such as the layout, functionality, quality or aesthetic appearance. All of the materials used in the manufacturing process will affect the end result but, among them all, the finish and colour chosen for the fronts are what will give the kitchen its character and personality.

Times and trends change and evolve. Wood is now demanding a lead role in the world of habitat reflected in materials and finishes that are much more resistant, practical and long-lasting. Oak stands out among the new wood designs incorporated into its range of products by Santos.

The Natural Oak finish chosen for the tall unit area of this project, creates a continuity with the floor of the room and, in combination with the white used in the rest of the furniture, helps create a warm and serene atmosphere.

The wall unit area is usually used for integrating ovens and fridges. It also offers substantial storage space.

There are a multitude of possibilities available for equipping the interiors of this type of units. They guarantee the user has comfortable, organised, and efficient spaces that are adapted to their particular needs.

The top is equipped with shelves that are usually used for kitchenware. We recommend that drawers are installed in the lower area as it is much more ergonomic that the contents come to the user than the other way around. The drawers, once opened, offer a general view of all of the interior and make it much easier to find or take out a product.

We think it is fair to say that a system based on drawers helps make the most of the width and depth available in this type of unit.

Santos introduces an exclusive interior drawer designed in-house. The front is made in the same material as the structure; this unifies the colours and the materials in the unit's interior. In contrast to conventional interior drawers this new solution offers fronts that are higher and help avoid the contents from falling out.

The dimensions and depth of the interior drawer of an oven unit make it a very versatile space for storing large items such as trays or bottles.

Horizontal projection: capacity and organisation

Santos' projection, contrary to traditional projections, avoids doors in the lower area and encourages the use of drawers. This system provides a panoramic view of what is inside the drawers and makes access easier, making cooking and cleaning more comfortable.

The need to organise the interior of the drawers means that each kitchen must have a place for day-to-day utensils in its cupboards and drawers.

An exhaustive study of the tasks that are carried out in the kitchen has made us organise drawers in three levels, each one, designed and equipped in a logical and functional manner.

All of the items and accessories that equip our drawers, from the combinable trays to the dividers for pot drawers, become key factors in making daily work in the kitchen a comfortable, safe and enjoyable experience.

Aesthetic and functional solutions

If a canopy hood is chosen, more discrete than traditional kitchen hoods, the smoke absorption solutions can go nearly unnoticed. If, in addition, you obtain an additional storage area, not even a centimetre of space is wasted.

In this project Santos proposes a profile for opening the wall units. It is an aluminium profile that is fixed to the unit and leaves enough space to pull and open the front comfortably and safely. The absence of handles on the kitchen's wall units becomes a reality thanks to this solution.

Installing wall units with swing-up doors makes it possible for the door to stay put exactly where you want it so that it doesn't interfere with the tasks at hand. This type of opening is thought of for units with a horizontal format and a maximum height of 60 cm.

The handles used in a kitchen, along with the colour and type of material selected, are the key elements in defining the aesthetics of the kitchen.

Santos has handles that have been designed in-house and will make your kitchen different from others on the market. Made in different finishes, materials and designs; all models have been designed to make the kitchen user's work easier, both in terms of accessing the inside of the units and cleaning the fronts. Once again, aesthetics and functionality go hand in hand.

There are many options. The final decision will depend on the tastes and preferences of the kitchen user.
